The back has one 125 g/m<sup>2</sup> phenolic film backer, black color.

Total resin content 65%.

## PRODUCTS, FEATURES AND APPLICATIONS

These panels are used extensively in the manufacture and repair of vehicles, the installation of stage and disabled ramps and utilized when a surface is required to be slip resistant.

If these anti-slip mesh panels are cut to specific size any newly created edges must be fully resealed using a suitable exterior paint. This will protect the boards and increase its longevity.
