

Energy Policy

TULSA S.A.

In our company, we have decided to make a formal commitment to the environment and the proper use of energy in the production of wood veneers and boards. We believe that it is essential to establish concrete actions to manage our energy and contribute positively to the care of natural and environmental resources, improving the quality of life of our community.

Due to the foregoing, we will require the support of the personnel of TULSA S.A., its contractors and suppliers, so that we work together in compliance with the following guidelines:

1. Establish an energy policy by establishing practices that help us reduce energy consumption and its impact.
2. Continuously improve our energy performance and the operation of the Energy Management System.
3. Ensure an instance where we can define and review the energy objectives and goals, in accordance with a specific action plan.
4. Ensure the allocation of human, financial and material resources that allow us to achieve the objectives and goals set. As well as ensuring the availability of information to achieve them.
5. Promote the acquisition of energy efficient products and services, together with the consideration of improvements in energy performance and operational control in the design of our projects.
6. Periodically review the legal requirements that apply to us and ensure compliance.
